Getting started with Pega Robotic Automation

It's easier than ever to get started with Pega Robot Studio. The streamlined interface and redesigned functions make building automations intuitive and efficient.

The first step in creating automations in Robot Studio is to create a project, which is the container for robotic automations and all components of your solutions.

- To learn more about the Robot Studio interface, see [Overview of the Robot Studio Interface](#).
- **Creating a project**
- **Opening an existing project**
- **Managing projects with Project Explorer**
- **Attended and unattended automations**
